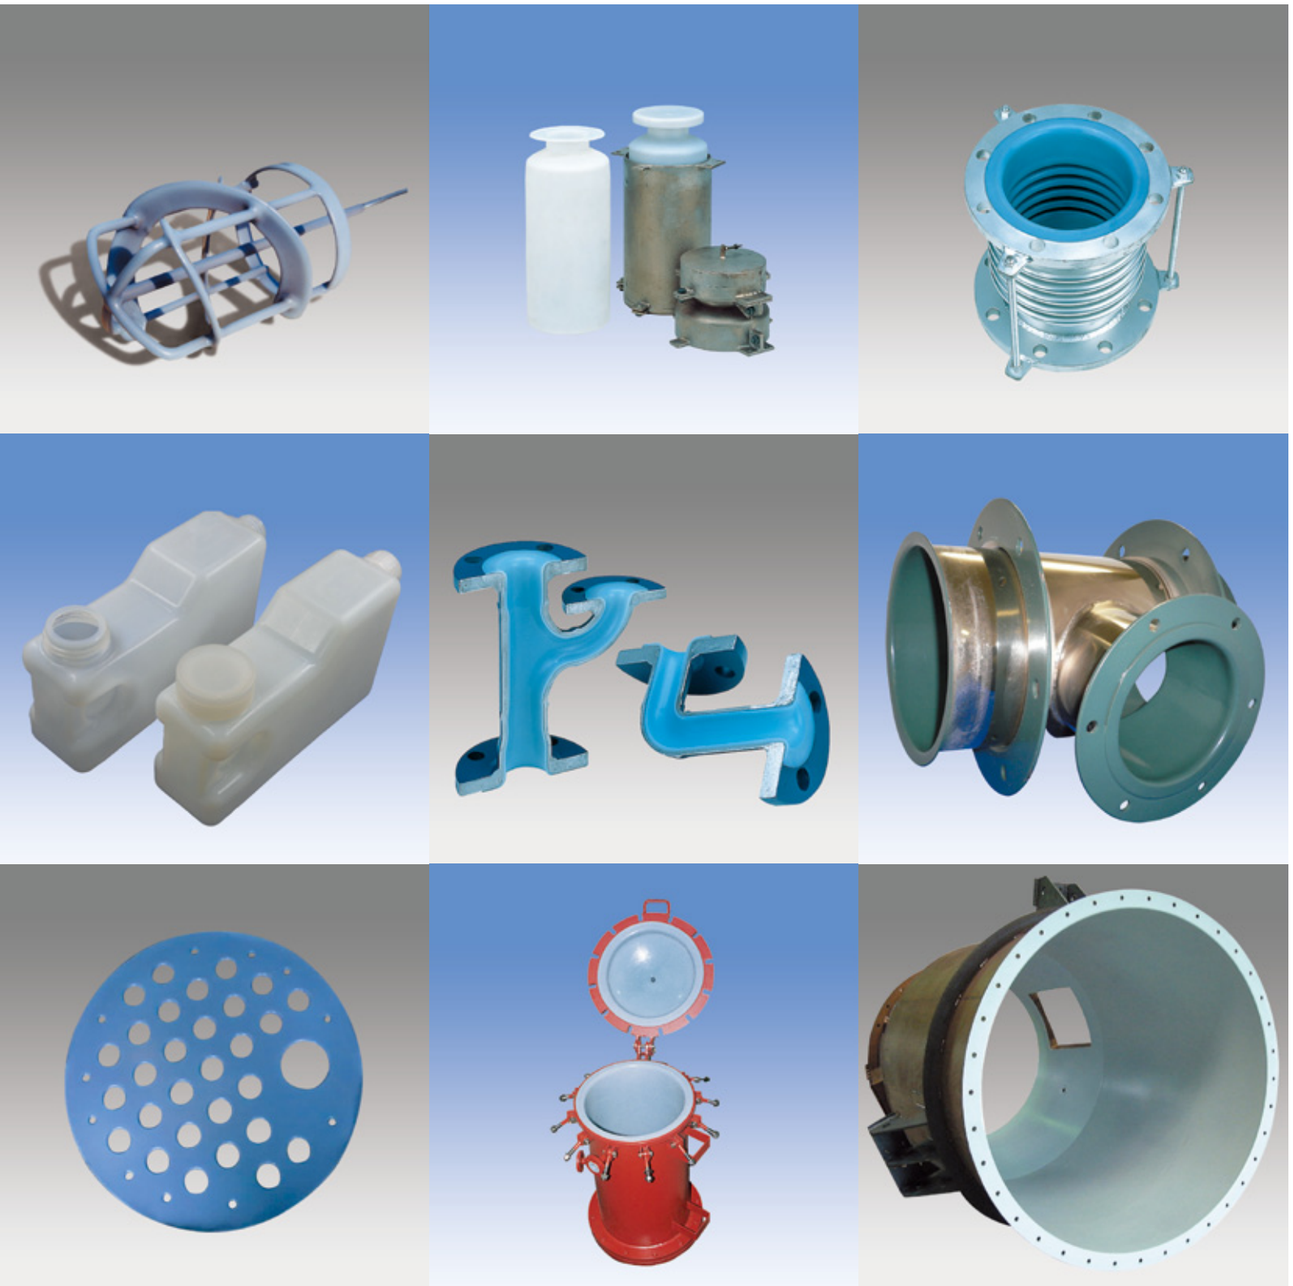
Fluon® ETFE
ETHYLENE-TETRAFLUOROETHYLENE COPOLYMER

Fluon® LM-ETFE
ETHYLENE-TETRAFLUOROETHYLENE COPOLYMER

LINING & COATING POWDER

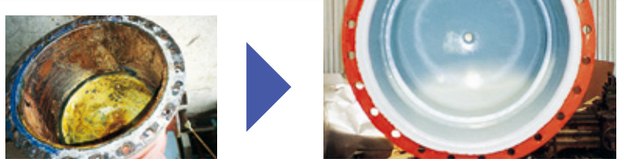


Fluon®ETFE Powder Coating & Lining

Fluon®ETFE is a thermoplastic fluoropolymer, a copolymer of tetrafluoroethylene and ethylene, developed by AGC. Fluon®ETFE is widely used in various industrial applications for its outstanding processability in addition to excellent chemical resistance and electrical properties associated with fluoropolymers generally, such as PTFE, PFA and FEP.
Various anti-corrosion equipments are made by Fluon®ETFE Powder by various moulding methods such as electrostatic powder coating, rotolining, fluid bed, etc. Seamless coating is easily available in each process.

■ Reactor Vessel

Suitable for coat on used vessels



Before　　After

Chemical Resistance of Fluon®ETFE

Fluon®ETFE is stable against most chemicals, including acids, alkalis and solvents, across a wide temperature and at various pressures. ETFE has the benefit of outstanding processability enabling various shapes and sizes, and thick coatings of over Imm to be achieved. The IL primer series increase Fluon®ETFE adhesive properties, thus increasing the potential applications of Fluon®ETFE.

*The data in this table to the 0.6 to 0.8mm thick lining of Fluon®ETFE over a carbon steel plate.
*The mark ● represents no alteration. The mark ▲ means slight alteration, but effective lining in use.
*These data were obtained in our laboratory and are given for reference.

Typical Application Methods of Fluon®ETFE Powder

Electrostatic Coating

Powder grades of ETFE are electrostatically charged then sprayed onto the substrate and subsequently baked in an oven.

Rotolining

Powder grades of ETFE are placed inside a double axial rotating container and subjected to a heating and cooling cycle. Stand-alone tanks may also be coated using an appropriate release agent.

Fluidised Bed Coating

The substrate is heated and dipped into a container of fluidised powder.

■ Fluon®ETFE Powder Grade List

Grade	Application									Characteristics	Thickness μm	Colour	Application			Mean particle size μm
	Coating					Lining							Electrostatic Coating	Roto-lining	Fluidised Bed Coating	
	Agitator	Grating	Parts	Hopper	Duct	Pipe	Tank	Pump	Tanker							
Z-8820X	●	●	●	●	●					normal use, non-stick	50 ～ 80	clear to white	●			10 ～ 40
Z-885C	●	●	●	●	●					thick coating, non-stick, high heat resistance	50 ～ 400	clear to white	●		●	40 ～ 80
TL-081	●	●	●	●	●					anti-cracking, high fluidity, high heat resistance	～ 1000	clear to white	●			80 ～ 120
ZL-522F						●	●	●	●	high erosion resistance	more than 2000	clear to white		●		100 ～ 140
TL-581						●	●	●		anti-cracking, high fluidity, high heat resistance	more than 2000	clear to white		●		230 ～ 310

CP-801XGN	●	●	●	●	●					base coat	50 ～ 100	green	●			80 ～ 120

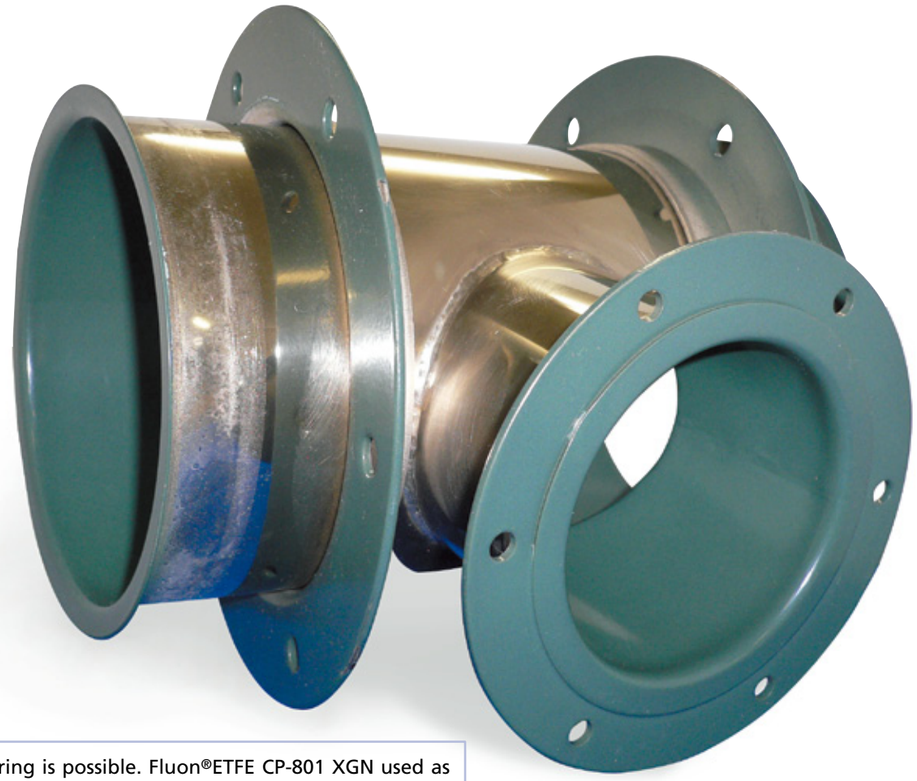
■ Fluon®ETFE Primer List (for High Adhesion Strength)

Grade	Characteristics	Colour	Application
IL-100	Liquid Primer (water based)	clear	spray
IL-200	Liquid Primer (alcohol based)	clear	spray

Fluon®ETFE for FM Standard Duct Works

FM Standard & FM Duct

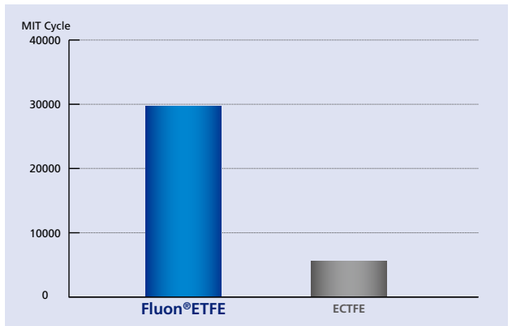
FM Global, a well known mutual insurance organization, provides an approval standard for fume exhaust ducts (Class 4922) regarding controlling the spread of a fire. Fluon®ETFE has excellent inflammability and is widely adopted as the material of choice for FM duct material.



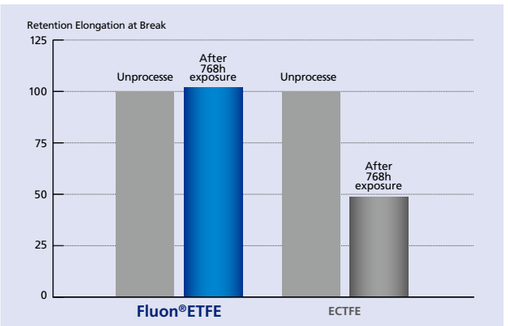
Colouring is possible. Fluon®ETFE CP-801 XGN used as an undercoat gives a green colour.

Fluon®ETFE has excellent stress crack resistance, thermal stability and ozone resistance.

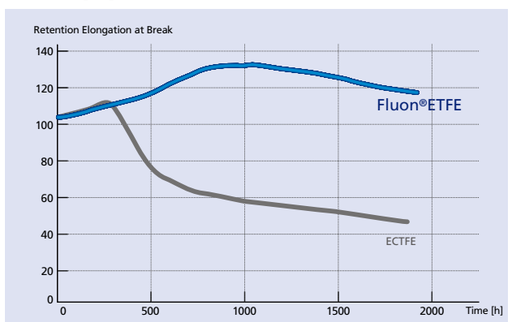
■ Stress Cracking



■ Ozone Resistance (Ozone Gas:10vol%, 0.7L/min)



■ Heat Aging at 200°C



Fluon®ETFE Powder for Food Contact Use

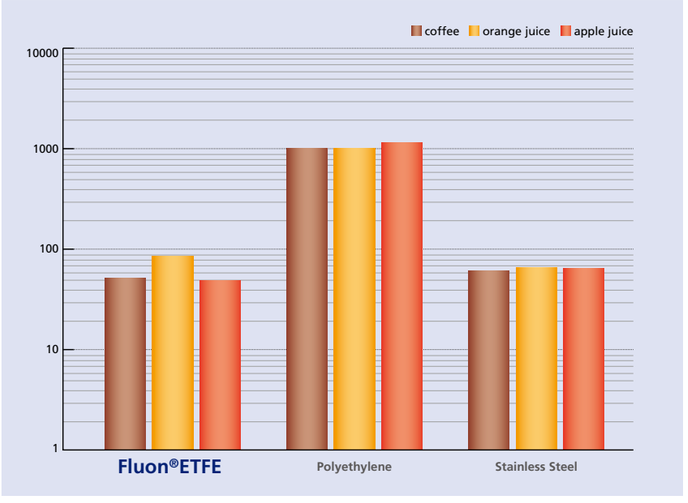
Fluon®ETFE has excellent anti-stick properties and significantly reduced odour transfer index compared to other polymer materials.

Ideal for Food Contact Applications

- Fluon®ETFE meets various food contact standards
- Fluon®ETFE is stable against most chemicals across a wide temperature range and contains no plasticizers
- Fluon®ETFE complies with Japanese food contact standard 1959-370 MHLW
- Fluon®ETFE has FDA compliance and is No. 481 in the Food Contact Notification List

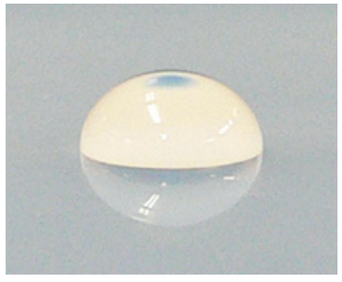
* See SDS for detailed information.

■ Odour Transfer Index



Measurement Method : Shimazu FF-2A after 80°C x 24h immersion and 30min flushing

■ Water Repellency of Fluon®ETFE



■ Water Contact Angle

Fluon®ETFE	96°
Polyethylene	89°
Polyethylene chloride	87°
Polymethyl methacrylate	80°
Nylon 66	70°
